

MILK HOUSE CLEANERS

StrongHold

ACID RINSE

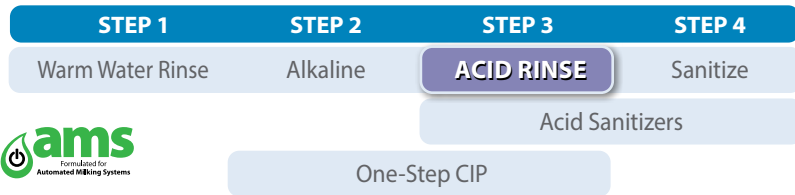

TOUGH ON MINERAL DEPOSITS

StrongHold acid rinses are formulated to neutralize alkalinity and react with minerals in milk and water so they will not build-up in the milking system.

Superior cleaning technology

StrongHold acid rinse products are available in a wide range of formulations. It is effective to meet any cleaning challenges such as mineral deposits (milk stone) that may consist of milk solids, calcium, magnesium, iron and sulfates. These deposits may harden and become layered on equipment. StrongHold is designed to react with these deposits for efficient cleaning.

- **Available in a complete range** of strengths that handle a variety of water conditions.
- **May also help protect** against corrosion.
- **Designed for use** following AgroClean CIP Detergent.
