TEAT SEALANT REMOVER

Formulated to dissolve tough teat sealant residues

AgroSolv Teat Sealant Remover is a specially-formulated CIP cleaner used to remove teat sealant residues and build-up from dairy pipelines and milking equipment.

Using AgroClean technology, AgroSolv quickly dissolves petroleum-based teat sealants and thoroughly rinses particles from the system without redepositing. It works in water temperatures as low as 72°F, will not freeze in colder weather and is DOT non-hazardous. This product is used separately from the standard wash cycle.

ABOUT AGROSOLV

The build-up above is formed from teat sealant that breaches the system.

Bacteria become trapped by this film, where they thrive. Residues caused by teat sealant are not affected by normal cleaning chemicals.

AgroSolv quickly dissolves the build-ups and rinses it clean from the system.
